Inflexxion Adds New Behavioral Health Assessment Tool to its Growing Behavioral Health Product Suite

New BHI-MV increases effectiveness and performance of clinical teams in behavioral health organizations

NEWTON, MA (February 16, 2015) – Inflexxion, creator of online behavioral health assessment programs including the Addiction Severity Index Multimedia Version (ASI-MV®) and the Comprehensive Health Assessment for Teens (CHAT®), announces the launch of the Behavioral Health Index Multimedia Version (BHI-MV™). The BHI-MV is designed to help behavioral health organizations improve clinical assessment effectiveness, consumer monitoring, and progress tracking; enhance treatment planning and clinical decision-making; and demonstrate the value, efficiency, and effectiveness of clinical services.

The BHI-MV is the newest addition to Inflexxion’s behavioral health product suite, a comprehensive suite of evidence-based online, consumer self-administered assessments designed to increase the effectiveness of clinical teams in organizations providing behavioral health services.

“The BHI-MV is an interactive, online behavioral health assessment based on the ASI-MV which was developed and research-tested with funding from the National Institute on Drug Abuse,” says Albert Villapiano, Ed.D., Vice President of Clinical Development at Inflexxion. “The BHI-MV helps guide treatment planning in behavioral health organizations for adults with mental health or substance use problems.” The BHI-MV can be accessed via computer, tablet or mobile device and the program’s self-administer private interview can increase client self-disclosure leading to higher assessment accuracy and better quality treatment planning.

“Inflexxion’s growing behavioral health product suite enables our customers to deliver a consistently high standard of care while recognizing substantial cost savings,” says Thomas Hegelund, President of Inflexxion. “Our behavioral health product suite offers the most advanced tools for behavioral health assessment processes and allow for consistent, systematic data collection across multiple agencies or locations, giving clinicians a powerful analytical tool to assess and monitor client progress and outcomes in real-time.”

“The BHI-MV has played a key role in guiding treatment planning and streamlining our clinical workflow,” says Phil Toal, Ed.D., Senior Vice President of Residential Services at Aspire Health Partners. “Our use of the BHI-MV has helped us improve the quality of care we provide and has made it simpler to measure consumers’ outcomes.”

Inflexxion officially launched the BHI-MV at the 2015 OPEN MINDS Performance Management Institute which took place February 12-13 at the Sheraton Sand Key Resort in Clearwater Beach, Florida.

To register for a free trial and learn how the BHI-MV and Inflexxion’s behavioral health products can work for your organization, please visit www.bhimv.com.

About Inflexion

Founded in 1989, Inflexion develops scientifically based, interactive technologies and creates online programs that reduce health-related risks, enhance clinical outcomes, and positively influence quality of care. Inflexion analyzes and disseminates health-related data for purposes of surveillance, risk management, epidemiological studies, quality improvement, and outcome measurement used by healthcare organizations and regulatory authorities to help improve care and inform public policy. Through education, Inflexion changes behaviors by providing online, empirically driven, health-related approaches to healthcare providers, patients, and the general population in the areas of addiction and recovery, pain management, and prescription drug safety.
